Lung cancer guidelines supplement editor

The management of non-small cell lung cancer is rapidly evolving toward personalized therapy based on molecular markers. This advancement was facilitated by the development of targeted therapy that was proven efficacious in clinical trials. The availability of newer therapies and the incorporation of markers in the treatment decision will have impact on the standard of care, not in that setting only but also in the subsequent lines of therapy.

The Saudi Lung Cancer Guidelines published in this Journal are the result of efforts by multidisciplinary team members representing Saudi Lung Cancer Group in Saudi Thoracic Society (STS) and Saudi Oncology Society (SOS) and representing various tertiary institutions in the Kingdom. These guidelines incorporated the latest evidences emerged from recent trials and took into account any relevant regional issues.

Many thanks to all members of this group and we are looking to any constructive feedback from our readers.

Saudi Lung Cancer Guidelines Group:

Dr. Abdulrahman Al Hadab, King Saud bin Abdulaziz University for Health Sciences, Riyadh, KSA
Dr. Adnan Hebshi, King Faisal Specialist Hospital & Research Center, Riyadh, KSA
